Cobalt Dynamic Application Security Testing (DAST)

Strengthen application security with automated and accurate vulnerability scanning

Consolidate Risk

The Cobalt Platform gives you a collective view of asset risk and overall security posture across automated tooling and manual pentests.

Overview

The complexity of today's applications, combined with the constant evolution of cyber threats, makes it increasingly difficult to ensure security measures. Traditional methods of security assessment often fall short of providing continuous insights, leading to potential blind spots.

The integration of Penetration Testing as a Service (PtaaS) and Dynamic Application Security Testing (DAST) addresses these challenges head-on. By combining the power of PtaaS with DAST, security and development teams gain a comprehensive solution for continuously assessing risk.

Key Benefits

Cobalt DAST enhances pentest programs with continuous testing to:

Explore every corner of your web applications for continuous and comprehensive security assessments.
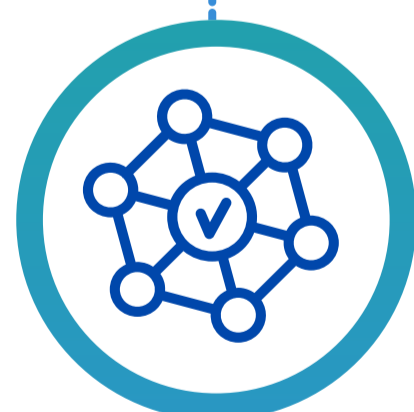

Our near-zero false positive rate means every detected vulnerability is a genuine threat that requires attention

Combine powerful manual and automated assessments for a comprehensive web application security solution

Elevate Security with Always-On Technology. Stay Protected 24/7.

Add Target ✕

*Name

What do you call this target?

*URL

What should be be scanned?

Cancel   **Add Target**

Scan Web Assets

Run authenticated or unauthenticated scans ad-hoc or scheduled for a comprehensive approach to asses web assets.

Get Findings in Real-Time

Continuously monitor web assets, to instantly identify vulnerabilities and streamline remediation prioritization with severity ratings.

View Report   **Start Scan**

Finding	Last found	State	Severity
Server-side template injection	2023-08-29 10:16	Pending Fix	● HIGH
Path traversal	2023-08-29 09:23	Pending Fix	● HIGH
Remote File Inclusion	2023-08-29 10:13	Pending Fix	● HIGH
XML external entity injection	2023-08-29 10:15	Pending Fix	● HIGH

Retest Individual Findings

Retest vulnerabilities at no cost to ensure thorough verification of remediation efforts and comprehensive regression testing.

Share Comprehensive Reports

Download a diverse set of report types, including crawl logs, to understand the scope, maintain compliance and answer customer requests.
